SAFETY CLAMPS

We make the Multipurpose Safety Clamp a safe and convenient tool to hold all types of tubulars during installation. It is made from high-grade alloy steel duly hardened & tempered with controlled hardness and ultrasonic /magnetic particle testing. It can also be used while running in large-diameter surface casing, handling drilling risers and casing heads during installation and lifting prepacked gravel liners.

The multi-link design provides uniform pressure around the pipe so the risks of crushing the pipe or damaging the surface are minimized. Each link complete with tapered slip is interchangeable as a unit and is readily adaptable to any diameter size from 2.7/8" to 36".

Model : ABSC
Figure No. 37

Description	ABSC-S			ABSC-R
